VODSVS - Outdoor Steel Volleyball System

Originally designed for park and recreation districts who were looking for a system that could be left out year round, this 2 3/8" galvanized steel system works well for anyone looking for a top quality outdoor system. Can be installed in either sand or asphalt. For sand installations simply order additional length to uprights for stability. Can be installed permanently or into 2' ground sleeves for a finished height of 8' 6" so both men's and women's volleyball may be played. Anti-whip winch is used to bring net to the correct tension. System includes standards, ground sleeves and net only. (Nylon covers optional, call for details). Complete system.

Shipping: Freight Class 60; 150 lbs.
